Danny Sullivan

APPLIED AI ENGINEERING | AGENTIC SYSTEMS | FORWARD-DEPLOYED DELIVERY

Raleigh, NC | hello@dannysullivan.ai | dannysullivan.ai

Applied AI engineer who turns business problems into working AI products, reliable workflows, and team adoption. Report directly to Gametime's CEO and own delivery from discovery and prototyping through production integration and iteration. Bring a forward-deployed engineering approach: work directly with business teams, translate ambiguous needs into technical requirements, build full-stack solutions, and help people use them effectively.

PROFESSIONAL EXPERIENCE

Gametime | Product Engineer | Jan 2026 - Present

- **Own SeatView, an AI-powered seat-view imagery platform** for Gametime, a live-event ticket marketplace. Help teams identify where ticket buyers lack a view from their seating section, source venue imagery, generate event-specific views, review quality, and publish approved images.
- **Engineer multimodal AI workflows** combining source discovery, image generation, independent AI quality review, and human approval. Connect model capabilities to a practical content-production workflow from prototype through production.
- **Build reliable agent orchestration** with durable execution, spending controls, safe retries, and cancellation. Bind publishing approval to the exact image reviewed so operators retain control over what goes live.
- **Deliver self-service AI tools for content teams.** Built Creative Hub, a workspace for sourcing, generating, and publishing imagery; restructured Amazon S3 storage and CloudFront image delivery for production use.
- **Ground AI priorities in business data.** Built a Snowflake-backed coverage agent that identifies missing seat-view imagery and ranks upcoming events by completed ticket-sales value, focusing generation on commercially relevant gaps.
- **Lead hands-on AI adoption with executive sponsorship.** Partner with teams to discover use cases, apply and evaluate AI, and test new models and spatial/3D capabilities to guide implementation choices.

Pluralsight | Sr. Creative Technologist and Staff Author, Generative AI | Apr 2022 - Jan 2026

- Built AI prototypes and internal tools; demonstrated working systems to product and content leaders, executives, and the board, translating technical capabilities into business use cases.
- Authored hands-on AI/ML labs covering Python, large language models, transformers, model evaluation, semantic search, and PyTorch; explored video models and extensions into labs and courses.

2U | Sr. Curriculum Engineer | Apr 2017 - Aug 2019

- Engineered and delivered a 12-week full-stack JavaScript bootcamp with a small development team; managed backlogs, GitHub issues, and continuous improvements.

UltraLinq Healthcare Solutions | Software Engineer | Mar 2016 - Apr 2017

- Built Python/Flask APIs and microservices for medical imaging and reporting in a HIPAA-compliant healthcare environment.

Creative Loafing Tampa | Software Developer | Sep 2012 - Mar 2016

- Built and maintained Ruby on Rails products for community events and print-distribution operations.

INDEPENDENT AI CONSULTING

Through **dannysullivan.ai**, offer hands-on AI working sessions for business leaders, translating business problems into practical prompts, repeatable workflows, and prototypes.

TECHNICAL & DELIVERY EXPERTISE

Applied AI: Agentic workflows, prompt engineering, context engineering, structured outputs, multimodal generation, model evaluation, human-in-the-loop review
Engineering: Python, TypeScript, React/Next.js, Node.js, PostgreSQL, Temporal, Snowflake, AWS
Delivery: AI use-case discovery, rapid prototyping, production integration, stakeholder partnership, executive communication, technical enablement, end-to-end ownership

EDUCATION

The George Washington University | M.A., Education & Human Development; B.A., Psychology
Flatiron School | Web Development | Completed training; subsequently taught for one semester.
